Claim Objections

Claim 15 is objected to for its awkward wording. In particular, the claim is constructed in such a fashion that it appears that Applicant is suggesting that trimethylchlorosilane is an embodiment of the fluoroalkylsilane. In the context of the broader disclosure, it is understood that the subject matter of claim 15 is intended to encompass those processes where a capping layer containing both of a fluoroalkylsilane and trimethylchlorosilane is laid down over the layer derived from methyltrichlorosilane and dimethyldichlorosilane. Clarification is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 5-12, and 14-16 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Murphy et al., U.S. patent # 6,743,516.

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in

Art Unit: 1712

the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

See column 4, lines 44-48, Examples XVII through XX and claim 24.

Double Patenting

Claims 1 and 3 are rejected on the ground of nonstatutory double patenting over claim 24 of U. S. Patent No. 6,743,516 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter. The subject matter of claims 1 and 3 fully encompasses that of claim 24.

Allowable Subject Matter

Claims 2, 4, and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The reference does not appear to contemplate forming an interlayer between the silica layer and the layer derived from methyltrichlorosilane and dimethyldichlorosilane nor does the prior art motivate one to modify the processes/articles of manufacture taught by *Murphy* in this manner.
